TRACKING

Tracking is a module designed to monitor and manage the full lifecycle of purchase orders made by Licores Maduro — from the moment an order is placed with a supplier until it is delivered and officially received at the warehouse.

Key Purpose
The module provides **end-to-end visibility** of purchase orders to produce real-time tracking of Purchase orders

Core Functions

- **Order Creation Tracking** – Records when and by whom the purchase order was placed.
- **Supplier Confirmation** – Tracks acknowledgment and confirmation from suppliers.
- **Shipment Monitoring** – Monitors dispatch dates, shipping details, and estimated arrival times.
- **Transit Status Updates** – Provides real-time or periodic updates while goods are in transit.
- **Delivery Confirmation** – Logs arrival at the warehouse.
- **Goods Receipt Validation** – Confirms quantities received and flags discrepancies (damages, shortages, overages).
- **Status Reporting & Alerts** – Generates reports and notifications for delays or issues.
- **And more**.

A user interface must be created that allows the user to:

1. Register / Update Purchase order Status,
2. Track Status History by entering related status dates.,
3. Filter Purchase orders across multiple dimensions,

Following is a structured technical outline for designing the Tracking Module**.**

Source Tables:

- **POHDRT** → Purchase order Header Table
- **PODTLT** → Purchase Order Detail Table

PURCHASE ORDER HEADER (POHDRT):
The Purchase Order Header Table is registered in VIP in table POHDRT.
This table contains the following relevant data:

POHDRT
PHWHSE (Warehouse)
PHPO# (Purchase Order Number
PHBORW (BEER or WINE Order)
PHBRVR (Supplier Code)
PHORDT (Order Date format YYYYMMDD)
PHSHDT (Order Ship date format (YYYYMMDD)
PHSHDT (Order Arrival Date format YYYYMMDD)

PHCON# (Container Number)
PHOQT (Total Order Quantity)
PHWEIG (Total Order Weight)
PHLTRS (Total Liters)
PHTOT$ (Total Amount)
PHOVR# (Order Vendor Number)
PHLINE (Total Order Regels)
PHSTAT (Order Status)

PURCHASE ORDER DETAIL TABLE (PODTLT):
The Purchase Order Detail Table is registered in VIP in table PODTLT
This table contains the following relevant data:

PODTLT
PDWHSE (Warehouse)
PDPO# (Purchase order Number)
PDLINE (Purchase order Line Number)
PDITEM (Item Number)
PDOQTY (Order Quantity)
PDRQTY (Received Quantity)
PDWEIG (Total Line Weight)
PDLTRS (Total Line Liters)
PDCST$ (Item Price)
PDUNIT (Units per Case)
PDSITEM (Supplier Item Code)
PDCDDT (Code Date)
PDBSW (Beer or Wine)
PDCLAS (Product Class)
PDBRVR (Supplier Code)
PDBRAN (Brand Code)
PDSUB (Sub Code)
PDRDAT (Receive Date)
PDSTAT (Order Status)

Additional fields that need to be created in the tracking Module:

Purchase Order Number	Retrieve from VIP
Status Order	**Fiiled automatic/Changed automatically**
Supplier	Filled automatic
Vendor/Brand	Filled automatic
Country	Filled automatic
Freight Forwarder	Filled automatic

Warehouse	Filled automatic
Total Cases Ordered	Filled automatic
Order Placed Date	Filled automatic
Comments	Input Field
Last Update Date	Input Field
Requested ETA	Input Field
Acknowlegde order 4 Days Yes/No	Input Field
Date Loading shipper	Input Field
Shipping Line	Input Field
Shipping Agent	Input Field
Vessel	Input Field
Container Number	Input Field
Consolidation Ref No. BL no.	Input Field
Container Size	Input Field
Date pro forma received	Input Field
Qty Cases Pro forma	Input Field
Factory Ready Date	Input Field
Estimated Date of Departure	Input Field
Estimated Date of Arrival	Input Field
Transit Time	Input Field
Bijlage Done?	Input Field
Date Arrival Invoice	Input Field
Invoice Number	Input Field
Date Arrival Bill of Lading	Input Field
Remarks	Input Field
Date Arrival Note Received	Input Field
Date Manifdest Received	Input Field
Date Copies to Declarant	Input Field
Date Customs Papers ready	Input Field
Date Customs Papers assesed in Asycuda	Input Field
Date Container at CPS	Input Field
Experation Date at CPS	Input Field
Date Customs Papers to CPS	Input Field
Date Container arrived at Licores	Input Field
Date container opened by Customs	Input Field
Date Container unload ready	Input Field
Return Date Container	Input Field
Days over conatiner at Licores	Calculated
Date Unload papers to Administration	Input Field
SAD Number	Input Field
B-C Number of Orders	Input Field

Exit Note Number	Input Field
Issues Comments	Input Field

Purchase Order Tracking – User Interface Specification

1. Objective

Create a **user interface screen** that allows users to select a purchase order from the **POHDRT table** and create or update a **tracking record** in the **Tracking table** within the SQL database.

The screen must allow users to:

- Search and select purchase orders.
- Automatically create a tracking record.
- Update tracking information related to the selected purchase order.

2. Data Source

Primary Table

- POHDRT – Purchase Order Header table
- PODTLT – Purchase Order Product Table

Tracking Table

- Tracking – Stores tracking and logistics information for purchase orders.

3. Purchase Order Record Selection and Tracking Creation:

When the user selects a purchase order:

1. The system checks if a **tracking record already exists**.
2. If no record exists:
    - A **new record must be created in the Tracking table**.
3. The **automatic fields must be populated automatically in the tracking table.**

4. Save Functionality

When the user clicks **Save**:

- The system updates the **Tracking table**.
- Validation must be applied to required fields.
- A success message must be displayed.

Example:

Tracking information successfully updated.

5. Selection Screen (Search Criteria)

The user must be able to filter purchase orders in the Tracking Table using the following fields:

Field	**Description**
Order Status	Status of the purchase order
Purchase Order Number	Unique identifier of the purchase order
Supplier	Vendor supplying the goods
Freight Forwarder	Logistics company responsible for shipment
Item Number	Specific item within the purchase order

Selection Behavior

- The user enters one or more search criteria.
- The system retrieves matching purchase orders from **TRACKING**.
- Results are displayed in a **search results grid**.

6. Additional Functional Requirements

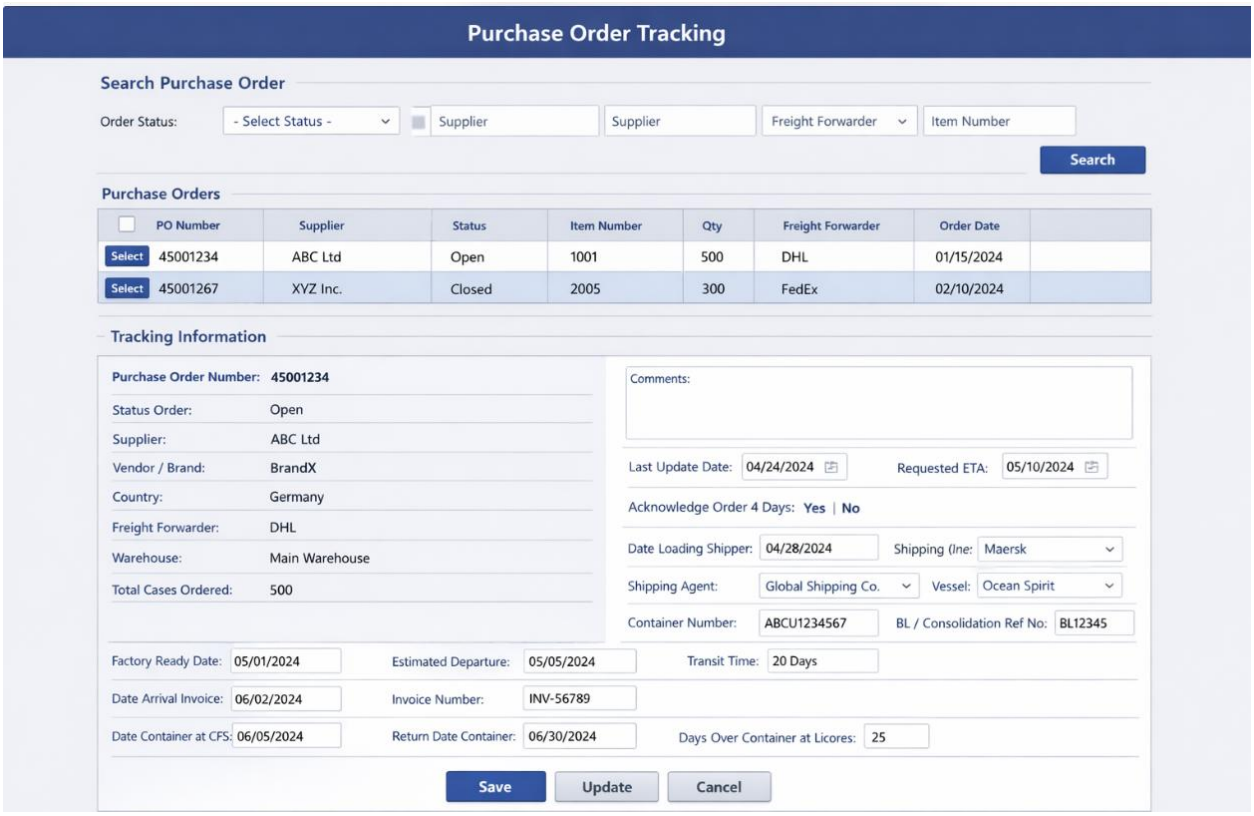
Validation

- Purchase Order Number must exist in POHDRT.
- Required tracking fields must not be empty.

Permissions

- Only authorized users may modify tracking records.

Following is an example of a user interface screen that can be amended.



0 – 0 – 0 – 0 – 0 - 0
