

Supplementary Units Hard Liquor and Rounding liters

Calculation of Supplementary liters:

Fields to use:

- Total Cartons,
- Quantity per Box,
- Mililiters per Unit
- Alcohol Percentage
- Liter Factor from Product_Class

Hard Liquor:

If Mililiter per Unit < 2000 or Liter per Unit < 2.00 then

Supplementary Liters = "Aantal Colli" x "Quantity per Box" x "Liters per Unit" x "Liter Factor"

Supplementary Liters = 25 x 6 x 0.75 x 1.2 = 135

If Mililiter per Unit >= 2000 or Liter per Unit >= 2.00 then

Supplementary Liters = "Aantal Colli" x "Quantity per Box" x "Liters per Unit" x "Alcohol %" / 50

Supplementary Liters = 324 x 6 x 2 x 40 / 50 = 3110.40

Other than Hard Liquor

In all other cases:

Supplementary Liters = "Aantal Colli" x "Quantity per Box" x "Liters per Unit"

Supplementary Liters = 160 x 12 x 0.75 = 1440.

Rounding of Liters:

If total liters < 100 then check second decimal:

1.55 will become 1.50

1.56 will become 1.60

1.95 will become 1.90

1.96 will become 2.00

If total liters >= 100 then

100.56 will become 100.00

100.60 will become 101.00

To convert from Liters to Hectoliters:

1.56 liters will become 2.00 liters which equals 0.02 Hectoliters.

1.01 liters will become 2.00 liters which equals 0.02 Hectoliters.

11.60 liters will become 12 liters which equals 0.12 Hectoliters

100.01 liters will become 101 liters which equals 1.01 Hectoliters.

Douanewaarde is total of Invoice value and Freight (Ocean and Inland): Rounding

Douanewaarde 850.63 will become 851.00

Douanewaarde 223.09 will become 224.00

Douanewaarde 85.01 will become 86.00

Calculated taxes: Always rounded in 1 decimal.

Tax 29.12 will become 29.20

Tax 4.18 will become 4.20

Tax 54.81 will become 54.90
